Application Guidebook

Quant um Matter Program

**Special Selection for International Students** 

Hiroshima University

#### Admission Policy of Graduate School of Advanced Science and Engineering

Doctoral Course

The Division of Advanced Science and Engineering of the Graduate School of Advanced Science and Engineering seeks students who have the following aspirations and motivation and have the basic academic abilities necessary for it:

An ambition for taking the leading role in advanced and prominent academic and inter-disciplinary research;

The will to take the leading role in professional occupations such as researchers and engineers in areas related to natural science, engineering, and information science;

A zeal for establishing the "science for sustainable development" from a multifaceted perspective and for solving regional and international issues by acquiring sophisticated knowledge and study skills for the academic areas related to natural science, engineering, and information science as well as a wide range of intelligence; and

Common sense as a member of society and ethics required for researchers and highly-professional engineers.

# Table of Contents

| 1. | Admission Policy of Quantum Matter Program   | 1 |
|----|--|---|
| 2. | Requirements for application   | 1 |
| 3. | Documents for application  | 1 |
| 4. | Deadline of Applications   | 3 |
| 5. | Adminissi on   | 3 |
| 6. | Fees   | 3 |
| 7. | Q hers   | 4 |
| 8. | Cont act address   | 4 |

### Lists of Academic Staffs and Research Subjects

## Quantum Matter Program

|                         |                                 | please see AdSM website (https://www.hiroshima-u.ac.jp/en/adsm).   |             |
|-------------------------|---------------------------------|--|-------------|
| Position                | ition Name Subjects of Research |  | Examination |
| Professors              | OKAMOTO, Hiromi                 | Study of charged-particle beams and non-neutral plasmas.   |             |
|                         | ONIMARU, Takahiro               | Experimental research on magnetic property of rare-earth compounds and<br>thermal property of clathrate compounds. Macroscopic measurements and<br>neutron scattering experiments are performed to reveal origins of new<br>phenomena.   |             |
|                         | KADOYA, Yutaka                  | Development of the devices for generation and detection of terahertz waves<br>using ultrafast pulse lasers, and the devices for lightwave control using artificial<br>material (meta-material).  | 1           |
|                         | KURIKI, Masao                   | Theoretical and experimental study for beam dynamics. Research and development of high energy accelerator and its applications for light source, X-ray source. Research for high brightness (polarized) electron and (polarized) positron sources and study for photo-cathode and laser as key technologies of the high brightness particle sources.                       | 1)          |
|                         | SHIMAHARA, Hiroshi              | Mechanism of anisotropic superconductivity and interplay between magnetism<br>and superconductivity in strongly correlated electron systems and quasi-low-<br>dimensional systems. Superconductivity in high magnetic fields including the<br>Fulde-Ferrell-Larkin-Ovchinnikov state. Magnetism in low and quasi-low<br>dimensional systems.                               | 1)          |
|                         | SUZUKI, Takashi                 | Experimental studies on the strongly correlated electron systems and new multiferroics in multiple extreme conditions (low temperature, high magnetic field and high pressure). Recently, we focus on exotic properties of compounds with a chiral structure.  | 1)          |
|                         | TAKANE, Yositake                | Theory of quantum electron transport in mesoscopic systems and low-<br>dimensional electron systems.   | 1           |
| Associate<br>Professors | SUZUKI, Hitoshi                 | Experimental study of the mechanisms of self-assembled/self-organized structures consisting of organic molecules with scanning probe microscopes and their application for nanotechnology. Development of new analysis methods of organic molecules and/or bio-molecules and new application techniques of bio-molecules(motor protein, etc.) using micro/nano structures. | 1)          |
|                         | TAKAHASHI, Tohru                | High Energy Physics and its application:<br>Physics of Tera-scale by high energy electron-positron collider<br>R&D of intense photon sources by the Laser-Compton scattering<br>Physics in intense electromagnetic fields  | 1           |
|                         | TANAKA, Arata                   | Theoretical studies on the 3d and 4f electrons and high-energy spectroscopies in transition-metal and rare-earth compounds.  | 1           |
|                         | NISHIDA, Munehiro               | Theoretical study of resonant optical response produced by surface plasmons in metallic nano-structures, and development of fast electromagnetic simulation softwares.   | 1           |
|                         | HIGAKI, Hiroyuki                | Experimental research on trapped charged particles and related physics.<br>Production of low energy particle beams and their application for atomic<br>physics, plasma physics, and beam physics research.   | 1           |
|                         | HIGUCHI, Katsuhiko              | Development of the energy-band theory beyond the local density approximation<br>and its application to solids.   | 1           |
|                         | Holger F. HOFMANN               | Theoretical research on quantum optics and quantum information; quantum computation and communication using highly non-classical states of light   | 1           |

## Quantum Matter Program

\* For more detailed information, please see AdSM website (https://www.hiroshima-u.ac.jp/en/adsm).

| Position                | Name               | Subjects of Research  |    |
|-------------------------|--------------------|---|----|
| Associate<br>Professors | MATSUMURA, Takeshi | Experimental study on ordered structures and fluctuations of charge, spin, orbital, and higher multipole moments in strongly correlated electron systems by means of neutron and resonant x-ray scatterings. Also by studying thermal and transport properties, we aim at total understanding from microscopic and macroscopic points of view.  |    |
|                         | YAGI, Ryuta        | Experimental investigation of nano-scale physics. Quantum coherence, single electron phenomena and non-equilibrium transport are studied by fabricating extremely small structures and measuring low-temperature transport.   | 1  |
|                         | UMEO, Kazunori     | Studies of the thermal, transport and magnetic properties of rare-earth and transition-metal compounds under high pressures. Main research subjects are pressure-induced quantum critical phenomena of heavy-fermion systems, anomalous magnetism in geometrically frustrated systems under pressure, and pressure dependence of the quasi-localized vibrational modes in clathrates.   | 1  |
|                         | MIYAOKA, Hiroki    | Experimental study of fundamental material properties and reactivity for<br>light elements based materials. Main subjects are research and development<br>of hydrogen production, hydrogen storage, and material conversion.<br>Functional materials are newly created through research on material<br>properties and reaction mechanism by original sample synthesis methods<br>and various analyses from wide points of view. |    |
| Lecturer                | TOMINAGA, Yoriko   | Crystal growth of semiconductor thin films and quantum structures, investigation of their optical characteristics, and development of novel optical devices.  |    |
| Assistant<br>Professors | IINUMA, Masataka   | Experimental studies on quantum optics and its application; applications to quantum information science, fundamental physics, and bioengineering by quantum optical methods and techniques.   | 1) |
|                         | ITO, Kiyokazu      | Experimental study on collective motions in charged particle systems.<br>Application of non-neutral plasma systems to beam physics. Production of nano-ion beam sources.  | 1  |
|                         | SAKAUE, Hiroyuki   | Experimental studies on the fabrication of the surfaces and films with new properties by using 2- or 3-dimensional self-assembled integration of molecules and nanoparticles.   | 1) |
|                         | HIGA, Nonoka       | Experimental study in strongly correlated electron systems by means of neutron, resonant x-ray and nuclear magnetic resonance under multiple extreme conditions. We clarify the electronic properties on a microscopic point of view.   | 1) |

Academic staffs below are in charge of plural programs including this program.

|                     | Staff              | Other Program                                     |
|---------------------|--------------------|---|
| Professor           | EKINO, Toshikazu   | Transdisciplinary Science and Engineering Program |
| Professor           | OGITA, Norio       | Transdisciplinary Science and Engineering Program |
| Professor           | HIGASHITANI, Seiji | Transdisciplinary Science and Engineering Program |
| Assistant Professor | SUGIMOTO, Akira    | Transdisciplinary Science and Engineering Program |
| Assistant Professor | NAGATO, Yasushi    | Transdisciplinary Science and Engineering Program |
| Assistant Professor | HASEGAWA, Takumi   | Transdisciplinary Science and Engineering Program |

### Quantum Matter Program

| Position                | Position Name Subjects of Research |   | Research Field                                   | Examination |
|-------------------------|------------------------------------|---|--|-------------|
| Professors              | HIGASHI, Seiichiro                 | Research on novel thin-film semiconductor processing techniques<br>such as crystalline growth, low-temperature deposition of<br>insulator films, and junction formation and their application to<br>large-area electronics (solar cells, flat panel displays, etc) and<br>ULSI devices. | Semiconductor<br>Engineering                     |             |
|                         | FUJISHIMA, Minoru                  | Research on system architecture, circuit design, layout<br>optimization, active/passive device modeling and measurement for<br>ultrahigh-frequency millimeter-wave and terahertz wireless<br>communication and sensors with nanometer CMOS integrated<br>circuits.                      | Frequency LSI                                    |             |
|                         | IWASAKA, Masakazu                  | Research on optical and magnetic properties of biogenic crystals<br>and living cells in tissue engineering. Electromagnetic<br>manipulation of biological materials in bio-MEMS for biomedical<br>science and biotechnology.  | Nanobio-<br>Electro-<br>magnetics<br>Engineering |             |
|                         | KUROKI, Shin-Ichiro                | Silicon-Carbide (SiC) harsh-environment electronics for space exploration, decommissioning of nuclear power stations and medical, SiC power semiconductor devices and silicon thin-film devices.  |  |             |
|                         | TERAMOTO, Akinobu                  | Research on devise structures, advanced process technology, and<br>evaluation system for advanced LSI, and research on new devise<br>structures, process technology of wide bandgap semiconductor<br>(GaN) for power devices and high-speed communication.                              | Nanoprocess<br>Engineering                       |             |
| Associate<br>Professors | AMAKAWA, Shuhei                    | RF/microwave/millimeter-wave CMOS circuit design. Circuit theory. Microwave and millimeter-wave measurement. Device characterization and modeling.  | RF Electronics                                   |             |
|                         | SASAKI, Mamoru                     | Analysis, synthesis and design of architecture and RF circuit in CMOS technology. High-speed transceivers for wireless and wired communications between LSI chips. Development of design method combining communication, mount and circuit technique.                                   |  |             |
