### Doctoral Course

The Division of Advanced Science and Engineering of the Graduate School of Advanced Science and Engineering seeks students who have the following aspirations and motivation and have the basic academic abilities necessary for it:

An ambition for taking the leading role in advanced and prominent academic and inter-disciplinary research;

The will to take the leading role in professional occupations such as researchers and engineers in areas related to natural science, engineering, and information science;

A zeal for establishing the "science for sustainable development" from a multifaceted perspective and for solving regional and international issues by acquiring sophisticated knowledge and study skills for the academic areas related to natural science, engineering, and information science as well as a wide range of intelligence; and

Common sense as a member of society and ethics required for researchers and highly-professional engineers.

## Lists of Academic Staffs and Research Subjects

### Quantum Matter Program

\* For more detailed information, please see AdSM website (<https://www.hiroshima-u.ac.jp/en/adsm>).

Position	Name	Subjects of Research	Examination
Professors	OKAMOTO, Hiromi	Study of charged-particle beams and non-neutral plasmas.	①
	ONIMARU, Takahiro	Experimental research on magnetic property of rare-earth compounds and thermal property of clathrate compounds. Macroscopic measurements and neutron scattering experiments are performed to reveal origins of new phenomena.	①
	KADOYA, Yutaka	Development of the devices for generation and detection of terahertz waves using ultrafast pulse lasers, and the devices for lightwave control using artificial material (meta-material).	①
	KURIKI, Masao	Theoretical and experimental study for beam dynamics. Research and development of high energy accelerator and its applications for light source, X-ray source. Research for high brightness (polarized) electron and (polarized) positron sources and study for photo-cathode and laser as key technologies of the high brightness particle sources.	①
	SHIMAHARA, Hiroshi	Mechanism of anisotropic superconductivity and interplay between magnetism and superconductivity in strongly correlated electron systems and quasi-low-dimensional systems. Superconductivity in high magnetic fields including the Fulde-Ferrell-Larkin-Ovchinnikov state. Magnetism in low and quasi-low dimensional systems.	①
	SUZUKI, Takashi	Experimental studies on the strongly correlated electron systems and new multiferroics in multiple extreme conditions (low temperature, high magnetic field and high pressure). Recently, we focus on exotic properties of compounds with a chiral structure.	①
	TAKANE, Yositake	Theory of quantum electron transport in mesoscopic systems and low-dimensional electron systems.	①
Associate Professors	SUZUKI, Hitoshi	Experimental study of the mechanisms of self-assembled/self-organized structures consisting of organic molecules with scanning probe microscopes and their application for nanotechnology. Development of new analysis methods of organic molecules and/or bio-molecules and new application techniques of bio-molecules(motor protein, etc.) using micro/nano structures.	①
	TAKAHASHI, Tohru	High Energy Physics and its application: Physics of Tera-scale by high energy electron-positron collider R&D of intense photon sources by the Laser-Compton scattering Physics in intense electromagnetic fields	①
	TANAKA, Arata	Theoretical studies on the 3d and 4f electrons and high-energy spectroscopies in transition-metal and rare-earth compounds.	①
	NISHIDA, Munehiro	Theoretical study of resonant optical response produced by surface plasmons in metallic nano-structures, and development of fast electromagnetic simulation softwares.	①
	HIGAKI, Hiroyuki	Experimental research on trapped charged particles and related physics. Production of low energy particle beams and their application for atomic physics, plasma physics, and beam physics research.	①
	HIGUCHI, Katsuhiko	Development of the energy-band theory beyond the local density approximation and its application to solids.	①
	Holger F. HOFMANN	Theoretical research on quantum optics and quantum information; quantum computation and communication using highly non-classical states of light	①

## Quantum Matter Program

\* For more detailed information, please see AdSM website (<https://www.hiroshima-u.ac.jp/en/adsm>).

Position	Name	Subjects of Research	Examination
Associate Professors	MATSUMURA, Takeshi	Experimental study on ordered structures and fluctuations of charge, spin, orbital, and higher multipole moments in strongly correlated electron systems by means of neutron and resonant x-ray scatterings. Also by studying thermal and transport properties, we aim at total understanding from microscopic and macroscopic points of view.	①
	YAGI, Ryuta	Experimental investigation of nano-scale physics. Quantum coherence, single electron phenomena and non-equilibrium transport are studied by fabricating extremely small structures and measuring low-temperature transport.	①
	UME0, Kazunori	Studies of the thermal, transport and magnetic properties of rare-earth and transition-metal compounds under high pressures. Main research subjects are pressure-induced quantum critical phenomena of heavy-fermion systems, anomalous magnetism in geometrically frustrated systems under pressure, and pressure dependence of the quasi-localized vibrational modes in clathrates.	①
	MIYAOKA, Hiroki	Experimental study of fundamental material properties and reactivity for light elements based materials. Main subjects are research and development of hydrogen production, hydrogen storage, and material conversion. Functional materials are newly created through research on material properties and reaction mechanism by original sample synthesis methods and various analyses from wide points of view.	①
Lecturer	TOMINAGA, Yoriko	Crystal growth of semiconductor thin films and quantum structures, investigation of their optical characteristics, and development of novel optical devices.	①
Assistant Professors	IINUMA, Masataka	Experimental studies on quantum optics and its application; applications to quantum information science, fundamental physics, and bioengineering by quantum optical methods and techniques.	①
	ITO, Kiyokazu	Experimental study on collective motions in charged particle systems. Application of non-neutral plasma systems to beam physics. Production of nano-ion beam sources.	①
	SAKAUE, Hiroyuki	Experimental studies on the fabrication of the surfaces and films with new properties by using 2- or 3-dimensional self-assembled integration of molecules and nanoparticles.	①
	HIGA, Nonoka	Experimental study in strongly correlated electron systems by means of neutron, resonant x-ray and nuclear magnetic resonance under multiple extreme conditions. We clarify the electronic properties on a microscopic point of view.	①

Academic staffs below are in charge of plural programs including this program.

Staff	Other Program
Professor EKINO, Toshikazu	Transdisciplinary Science and Engineering Program
Professor OGITA, Norio	Transdisciplinary Science and Engineering Program
Professor HIGASHITANI, Seiji	Transdisciplinary Science and Engineering Program
Assistant Professor SUGIMOTO, Akira	Transdisciplinary Science and Engineering Program
Assistant Professor NAGATO, Yasushi	Transdisciplinary Science and Engineering Program
Assistant Professor HASEGAWA, Takumi	Transdisciplinary Science and Engineering Program

# Quantum Matter Program

For more detailed information, please see AdSM website (<https://www.hiroshima-u.ac.jp/en/adsm>).

Position	Name	Subjects of Research	Research Field	Examination
Professors	HIGASHI, Seichiro	Research on novel thin-film semiconductor processing techniques such as crystalline growth, low-temperature deposition of insulator films, and junction formation and their application to large-area electronics (solar cells, flat panel displays, etc) and ULSI devices.	Semiconductor Engineering	
	FUJISHIMA, Minoru	Research on system architecture, circuit design, layout optimization, active/passive device modeling and measurement for ultrahigh-frequency millimeter-wave and terahertz wireless communication and sensors with nanometer CMOS integrated circuits.	Ultrahigh-Frequency LSI and Systems	
	IWASAKA, Masakazu	Research on optical and magnetic properties of biogenic crystals and living cells in tissue engineering. Electromagnetic manipulation of biological materials in bio-MEMS for biomedical science and biotechnology.	Nanobio-Electromagnetics Engineering	
	KUROKI, Shin-Ichiro	Silicon-Carbide (SiC) harsh-environment electronics for space exploration, decommissioning of nuclear power stations and medical, SiC power semiconductor devices and silicon thin-film devices.	Nanodevice Engineering	
	TERAMOTO, Akinobu	Research on device structures, advanced process technology, and evaluation system for advanced LSI, and research on new device structures, process technology of wide bandgap semiconductor (GaN) for power devices and high-speed communication.	Nanoprocess Engineering	
Associate	AMAKAWA, Shuhei	RF/microwave/millimeter-wave CMOS circuit design. Circuit and millimeter-wave measurement. Device modeling.	RF Electronics	
		design of architecture and RF circuit in CMOS technology. High-speed transceivers for wireless and wired communications between LSI chips. Development of design method combining communication, mount and circuit technique.	Systems	

YOSHIDA, Takeshi
