

Specifications for Major Program

Name of School (Program) [School of Engineering, Cluster 4
(Social and Environmental Engineering)]

Program name (Japanese) (English)	建築プログラム <hr/> Program of Architecture and Building Engineering
1. Academic degree to be Acquired : C. . F	

2. Overview

(1) F . . C E .

This program aims to foster and produce future members of a global society who have the knowledge to be innovative, creative, take leadership, and possess language abilities that will help them play an important role in the international world.

specialized education designed to achieve the following goals:

- (A) The ability to contribute to the realization of peaceful living environments through the creation of architecture (development of professionals who can contribute to a peaceful living environment)
- (B) The ability to contribute to social progress and human happiness (development of professionals that can contribute to human happiness)
- (C) Possession of a deep personality and ethics as an engineer (cultivation of ethics as engineers)
- (D) Possession of basic knowledge of engineering in architecture (acquisition of basic knowledge of engineering)
- (E) Possession of comprehensive, individual expertise and abilities in architecture (acquisition of architectural expertise and abilities)
- (F) Possession of design capabilities (cultivation of design capabilities)
- (G) Possession of Japanese communication skills and international communication skills (cultivation of communication skills)
- (H) The ability to undertake personal development and continued training on a permanent basis (cultivation of ability to undertake personal development and continued training)
- (I) Possession of the ability to make precise and rational plans, and to implement them (cultivation of ability to make plans and to implement them)

4. Curriculum Policy (Policy for Preparing and Implementing the Curriculum)

The Program of Architecture and Building Engineering organizes and implements a curriculum according to the following policy, so that students may achieve the goals A to I in the academic awards policy.

Learning outcomes are evaluated based on the grade calculation for each subject and the level of attainment against the goals set by the education program.

Students acquire the comprehensive knowledge and methodology necessary to undertake architecture in the 21st century. In the first year, students acquire the comprehensive knowledge and methodology necessary to undertake architecture in the 21st century. In the second year, students acquire the comprehensive knowledge and methodology necessary to undertake architecture in the 21st century. In the third year, students acquire the comprehensive knowledge and methodology necessary to undertake architecture in the 21st century. In the fourth year, students acquire the comprehensive knowledge and methodology necessary to undertake architecture in the 21st century.

The Program of Architecture and Building Engineering organizes and implements a curriculum according to the following policy, so that students may achieve the goals A to I in the academic awards policy. Learning outcomes are evaluated based on the grade calculation for each subject and the level of attainment against the goals set by the education program.

Students acquire the comprehensive knowledge and methodology necessary to undertake architecture in the 21st century. In the first year, students acquire the comprehensive knowledge and methodology necessary to undertake architecture in the 21st century. In the second year, students acquire the comprehensive knowledge and methodology necessary to undertake architecture in the 21st century. In the third year, students acquire the comprehensive knowledge and methodology necessary to undertake architecture in the 21st century. In the fourth year, students acquire the comprehensive knowledge and methodology necessary to undertake architecture in the 21st century.

Students acquire the comprehensive knowledge and methodology necessary to undertake architecture in the 21st century. In the first year, students acquire the comprehensive knowledge and methodology necessary to undertake architecture in the 21st century. In the second year, students acquire the comprehensive knowledge and methodology necessary to undertake architecture in the 21st century. In the third year, students acquire the comprehensive knowledge and methodology necessary to undertake architecture in the 21st century. In the fourth year, students acquire the comprehensive knowledge and methodology necessary to undertake architecture in the 21st century.

Students achieve goal B (development of professionals that can contribute to human happiness) through mastery of architectural design drawing. In the second year, students acquire the comprehensive knowledge and methodology necessary to undertake architecture in the 21st century. In the third year, students acquire the comprehensive knowledge and methodology necessary to undertake architecture in the 21st century. In the fourth year, students acquire the comprehensive knowledge and methodology necessary to undertake architecture in the 21st century.

Students achieve goal C (cultivation of ethics as engineers) through mastery of the specialized basic subjects C, B, and the specialized subject C, D, F, B in the third year.

Students achieve goal D (acquisition of basic knowledge of engineering) through mastery of the specialized basic subjects B, D, B, D through the second year.

and architectural planning offered from the second year through the third year.

Architecture I, in the third year.

and this offered from the third year through the fourth year.

through mastery of the

, IV,

on evaluation criteria calculated by adding the weighted values to the numerically-converted values of their academic achievements (S = 4, A = 3, B = 2, and C = 1) in each subject being evaluated.

- * See the relationship between evaluation items and class subjects in the attached sheet 3.
- * See the curriculum map in the attached sheet 4.

9. Graduation Thesis (Graduation Research) (Purpose, when and how it is assigned, etc.)

The graduation thesis is intended to be a major subject for the achievement of the following learning and educational goals.

- B)E* . . . engineering knowledge in architecture
 - B)F*
 -)G*
 -)H* tional communication skills
 -)I*
- on an ongoing basis
-)* nt them

When it is assigned: At the start of fourth year (only those who meet the conditions for undertaking a graduation thesis are to be assigned.)

Conditions for undertaking a graduation thesis

- (1) Students must acquire 46 credits in liberal arts education.
- (2) Students must acquire 38 or more credits (including all compulsory subjects) in the basic special courses of the specialized education.
- (3) Students must complete Architectural Project and Drawing III, IV .
- (4) Out of the total number of credits in basic special education and special education to be acquired before graduation (excluding the 5 credits for graduation thesis), the number of credits yet to be obtained should be 10 or fewer.

Details of each laboratory to which students can be assigned, as well as details of research undertaken by supervisors and the assignment policy (the number of students acceptable to each laboratory and supervisor, etc.) are to be explained by the provided guidance given to students. Depending on academic results in Architectural Project and Drawing, about 10% of students who can undertake a graduation thesis will be able to submit graduation designs as their thesis.

Assignment is decided according to the requests of students who can undertake a graduation thesis. However, since the number of acceptable students is limited, adjustments may be made.

10. Responsibility System

)2* EDB) . - E - D - . . B *

In this program, the architectural studies group, consisting of the teachers in charge. and its subsidiary, the self-assessment evaluation committee, are organized in order to check and improve the program. Under these committees, a curriculum examination working group, a planning examination working group for faculty development (FD), and an external evaluation working group are established. For the smooth running of the educational program in each area, these committees and working groups check and evaluate the learning and

educational goals, the evaluation methods used to judge levels of attainment, and the whole educational system (educational methods, educational environment, etc.) (Check), examine educational improvement methods (Act), make improvement plans to improve learning and educational goals, educational methods, and the educational environment (Plan), and implement these plans (Do). In this way, the PDCA improvement cycle is established. This program has a system under which all the teachers in charge, centering on the program manager, cooperate and move forward.

(2) Program evaluation

D

In this program, evaluation is carried out according to the following evaluation criteria.

1. Whether the program is able to check the program based on the evaluation results of learning and the attainment level of educational goals, whether its mechanism is disclosed, and whether the related activities are being implemented

2. Whether the program aims mechanisms that take into consideration the requirements of society or requests from students, and whether it is organized so as to check the functioning of the education check system itself

3. Whether the program reviews the records of the meetings of committees that constitute the education evaluation system

4. Whether the program conducts evaluations, and whether the related activities are being conducted

I () *

The architectural studies group and each committee focus on evaluation and improvement of the program. The most important things are the following two points.

F attainment levels are conducted continuously.

-assessment evaluation committee implements the following unique questionnaires as part of the program evaluation.

B implementation status, lecture improvement plans, opinions about other lectures, etc.

B (targeted at graduates and companies)

The architectural studies group requests the committees to check the program, present their improvement plans, and prepare FD proposals, and, after discussing the reports and proposals submitted by the committees, the group decides on the improvement strategy. As the group consists of all teachers in charge of the program, the evaluation and improvement strategy decided here is considered to have been explained to all members, and is then put into action. In particular, regarding matters associated with the curriculum, the curriculum examination working group in the self-assessment evaluation committee makes its own checks and proposes the necessary improvement plan. The validity of this program from the point of view of society is checked by the external evaluation working group, evaluated by external academics, and checked by means of a questionnaire targeted at employers and graduates. These activities are conducted on an ongoing basis.

In this program, tutors k students at the end of the semester, tutors give guidance so that students can achieve the learning and educational obtained from tutors, which are reflected in the improvement of this program. Furthermore, based on the results of the class evaluation questionnaire targeted at students, an improvement questionnaire about class improvement measures, etc. targeted at teachers is carried out. This program improves classes in response to student requests.

Cluster 4 (Civil Engineering and Architecture)

Required subject (period of registration specified)

Compulsory elective subject (any of these subjects shall be registered)

Free elective subject (any of these subjects shall be registered)

Subject Type	Required No. of credits	Class subjects	No. of credits	Type of course registration	Year in which the subject is taken(*The lower figure means semester) Note 1																
					1st grade				2nd grade				3rd grade				4th grade

No. of credits required for graduation		46																			

- Note** When students fail to acquire the credit during the term or semester marked with in the boxes for the year in which the course is taken, they can take the course in subsequent terms or semesters. Depending on class subject, courses may be offered in semesters or terms different from those scheduled. Please be sure to check the time schedule for Liberal Arts Education subjects to be issued every year.
- Note** The credit obtained by mastery of "English-speaking Countries Field Research" or self-directed study of "Online Seminar in English A/B" cannot be counted towards the credit necessary for graduation. The credit obtained by Overseas Language Training can be recognized as Communication I or II if application is made in advance. For more details, please refer to the article on English in Liberal Arts Education in the student handbook.
- Note** We have a recognition of credit system for foreign language proficiency tests. For more details, please refer to the article on English in Liberal Arts Education in the student handbook.
- Note** Students must take "Elements of Information Literacy" provided in the first semester. You can take the "Exercise in Information Literacy" provided in the second semester only if you fail to obtain credit for "Information Utilization Basics."
- Note** Students must take both Experimental Methods and Laboratory Work 1credit and Experimental Methods and Laboratory Work 2credit.
- Note** Students can calculate the credits of Basic English Usage.

Academic Achievements in Architecture and Building Engineering

The Relationship between Evaluation Items and Evaluation Criteria

	Excellent	Very Good	Good
(A) Understanding on development of human resources who can contribute to a peaceful global environment. (Being able to name symbolic buildings of peace city Hiroshima and to describe their characteristics. Being able to explain the city planning and history designed for peace. Being able to express their opinions to create a peaceful environment)	Understand and be able to explain development of human resources who can contribute to a peaceful global environment. (Being able to name symbolic buildings of peace city Hiroshima and to describe their characteristics. Being able to explain the city planning and history designed for peace. Being able to express their opinions to create a peaceful environment)	Understand development of human resources who can contribute to a peaceful global environment. (Being able to name symbolic buildings of peace city Hiroshima and to describe their characteristics. Being able to explain the city planning and history designed for peace. Being able to express their opinions to create a peaceful environment)	Understand outline of development of human resources who can contribute to a peaceful global environment. (Being able to name symbolic buildings of peace city Hiroshima and to describe their characteristics. Being able to explain the city planning and history designed for peace. Being able to express their opinions to create a peaceful environment)
(B) Understanding on development of human resources who can contribute to human happiness. (Being able to explain domestic and global issues, and to express their opinions. Learning liberal arts for social science to find a direction from a global point of view)	Understand and be able to explain on development of human resources who can contribute to human happiness. (Being able to explain domestic and global issues, and to express their opinions. Learning liberal arts for social science to find a direction from a global point of view)	Understand development of human resources who can contribute to human happiness. (Being able to explain domestic and global issues, and to express their opinions. Learning liberal arts for social science to find a direction from a global point of view)	Understand outline of development of human resources who can contribute to human happiness. (Being able to explain domestic and global issues, and to express their opinions. Learning liberal arts for social science to find a direction from a global point of view)
(C) Understanding on cultivation of a sense of ethics for engineers (Being able to enumerate and explain examples for effects of actions and products of engineers on our society and to express their opinions. Learning liberal arts for humanities and social science to find their directions from a global point of view)	Understand and be able to explain cultivation of a sense of ethics for engineers (Being able to enumerate and explain examples for effects of actions and products of engineers on our society and to express their opinions. Learning liberal arts for humanities and social science to find their directions from a global point of view).	Understand cultivation of a sense of ethics for engineers (Being able to enumerate and explain examples for effects of actions and products of engineers on our society and to express their opinions. Learning liberal arts for humanities and social science to find their directions from a global point of view)	Understand outline of cultivation of a sense of ethics for engineers (Being able to enumerate and explain examples for effects of actions and products of engineers on our society and to express their opinions. Learning liberal arts for humanities and social science to find their directions from a global point of view)
(D) Understanding on learning basic engineering knowledge. (Being able to explain basic contents of mathematics, physics and information technology. Being able to apply the basic contents to architecture and building engineering)	Understand and be able to explain learning basic engineering knowledge. (Being able to explain basic contents of mathematics, physics and information technology. Being able to apply the basic contents to architecture and building engineering)	Understand learning basic engineering knowledge. (Being able to explain basic contents of mathematics, physics and information technology. Being able to apply the basic contents to architecture and building engineering)	Understand outline of learning basic engineering knowledge. (Being able to explain basic contents of mathematics, physics and information technology. Being able to apply the basic contents to architecture and building engineering)
(E-1) Understanding on cultivation of expert knowledge and ability for architecture and building engineering. ((1) General and basic knowledge and ability a) Basic knowledge and ability for architectural design and planning)	Understand and be able to explain cultivation of expert knowledge and ability for architecture and building engineering. ((1) General and basic knowledge and ability a) Basic knowledge and ability for architectural design and planning)	Understand cultivation of expert knowledge and ability for architecture and building engineering. ((1) General and basic knowledge and ability a) Basic knowledge and ability for architectural design and planning)	Understand outline of cultivation of expert knowledge and ability for architecture and building engineering. ((1) General and basic knowledge and ability a) Basic knowledge and ability for architectural design and planning)
(E-2) Understanding on cultivation of expert knowledge and ability for architecture and building engineering. ((1) General and basic knowledge and ability a) Basic knowledge and ability for architectural design and planning)	Understand and be able to explain cultivation of expert knowledge and ability for architecture and building engineering. ((1) General and basic knowledge and ability b) Basic knowledge and ability for architectural environments)	Understand cultivation of expert knowledge and ability for architecture and building engineering. ((1) General and basic knowledge and ability b) Basic knowledge and ability for architectural environments)	Understand outline of cultivation of expert knowledge and ability for architecture and building engineering. ((1) General and basic knowledge and ability b) Basic knowledge and ability for architectural environments)
(E-3) Understanding on cultivation of expert knowledge and ability for architecture and building engineering. ((1) General and basic knowledge and ability c) Basic knowledge and ability for structural engineering)	Understand and be able to explain cultivation of expert knowledge and ability for architecture and building engineering. ((1) General and basic knowledge and ability c) Basic knowledge and ability for structural engineering)	Understand cultivation of expert knowledge and ability for architecture and building engineering. ((1) General and basic knowledge and ability c) Basic knowledge and ability for structural engineering)	Understand outline of cultivation of expert knowledge and ability for architecture and building engineering. ((1) General and basic knowledge and ability c) Basic knowledge and ability for structural engineering)
