# For entrants in FY 2020

2	1	3	4

n in this program, the student is required to acquire:

-

-

\_

Students study the fundamental subjects for one year after entering the university to acquire the basic knowledge required for studying the expertise. Then they mainly study the specialized fundamental subjects common for the all students of School of Applied Biological Science in the second semester of the second year. Particularly, they take the subjects of Laboratory Work in General Chemistry, Laboratory Work in General Physics, and Laboratory Work in General Biology I & II (including computer exercise) as those regarding experiments that are common for all students of the School of Applied Biological Science that consist of to get basic training for experiments in a wide area that is commonly required for the students of the School of Applied Biological Science, understanding for bioethics and ethics of science by the first semester of the School of Applied Biological Science, understanding for bioethics and ethics of science by the first semester of the second year to allow themselves to understand the aim and characteristics of each major program and select the most appropriate program.

6. Available qualification

(1) Educational personnel certification: Type 1 License for High School Teacher (science)

Total	44	- 60	1 1		1 1	1	1		

- Note 1: The year indicated with a circle mark represents that in which students typically take the subject. The year with a double circle mark indicates the year in which students are highly recommended to take the subject. Students are allowed to take the subject in any year after that indicated with a circle or double circle mark. It is required to confirm the semester in which the subject is provided in the class schedule for liberal arts education subjects in the Students' Handbook because some subjects might be provided in different semester from that which is provided in this document.
- Note 2: The credit for "Field Research in the English-speaking World" that is earned through such as a short-term study abroad and that for "Online English Seminar I," "Online English Seminar II," and "Online English Seminar III" that is earned through a self-study, are accepted as the credit for English required for graduation. Achievement in a foreign language skill test and language training might be accepted as a credit. For further information, refer to the description regarding English subjects in the liberal arts education and the item "Credit based on Achievement in Foreign Language Skill Test" in the Students Handbook.

(PP. 30 - 31, Liberal Arts)

- Note 3: For the information, Data Science subject, it is required to take the subject "Elements of Information Literacy" that is provided in the first semester in the first year. Only when failing to earn the credit for "Elements of Information Literacy," is it allowed to take the subject "Exercise in Information Literacy" that is provided in the second semester in the first year.
- Note 4: It is required to earn 4 credits or more for the natural science subjects and 4 credits or more for the human & social science subjects.

However, "Fundamentals of Biology" of the natural science subjects is a subject for which students are requested to take if he/she did not take biology subjects in the entrance exam (including the University Testing Center Examination).

For the other students, the credit for the subject "Fundamentals of Biology" is not accepted as that for graduation.

It is allowed to include up to 4 credits for society-related subjects as credits for the Human & Social Science Subjects.

Note 5: For health & sports subjects, it is recommended to take a practicum in sports.

- Note 6: Students who studied Mathematics III in high school are required to take the subject "Basic Calculus." Students who did not study Mathematics III in high school are required to take the subject "Elements of Calculus."
- Note 7: Students who did not take chemistry subjects in the entrance exam (including the University Testing Center Examination) are required to take the subject "Basic Concepts of Chemistry." For those students, the credit for the subject "General Chemistry" is not accepted for graduation.

For students who take chemistry subjects, the credit for the subject "Basic Concepts of Chemistry" is not

accepted for graduation.

Note 8: It is required to select two combinations of subjects from the following to earn credits for them: "Experimental Methods and Laboratory Work in Physics II" and "Experimental Methods and Laboratory Work in Physics II"; "Experimental Methods and Laboratory Work in Chemistry II" and "Experimental Methods and Laboratory Work in Chemistry II"; and "Experimental Methods and Laboratory Work in Biology II" and "Experimental Methods and Laboratory Work in Biology II"."

## Results of study in Applied Animal and Plant Science Program

Relation between evaluation items and evaluation criteria

		Study achievement		Evaluation criteria	riteria						
		Evaluation items	Excellent	Very Good	Good						
n o W l e	(1)	Ability for comprehensive and cross- disciplinary thinking and knowledge / understandings required to see a phenomena from a broad, top-down perspective and to take action for solving problems regarding the specialized area.	Has superior ability for comprehensive and cross- disciplinary thinking and capability to see a phenomenon from a broad, top-down perspective and to take action for solving problems regarding the specialized area.	Has sufficient ability for comprehensive and cross- disciplinary thinking and capability to see a phenomenon from a broad, top-down perspective and to take action for solving problems regarding the specialized area.	Has basic ability for comprehensive and cross- disciplinary thinking and capability to see a phenomenon from a broad, top-down perspective and to take action for solving problems regarding the specialized area.						
d g e &		Basic knowledge and understanding required for acquiring expertise	Has fundamental knowledge and profound understanding required for acquiring expertise, and is capable of explaining this knowledge while associating it with items related to other areas.	Has fundamental knowledge and profound understanding required for acquiring expertise, and is capable of sufficiently explaining this knowledge while associating it with items related to other areas.	Has fundamental knowledge and profound understanding required for acquiring expertise, and is capable of providing basic explanation of this knowledge while associating it with items related to other areas.						
u n d e r s	(3)	Knowledge and understanding regarding natural phenomena related to animal and plant production in levels of molecule, cell, and individual organism and production environment that supports the phenomena	Capable of providing detailed explanation regarding natural phenomena related to animal and plant production in levels of molecule, cell, and individual organism and production environment that supports the phenomena.	Capable of providing explanation regarding natural phenomena related to animal and plant production in levels of molecule, cell, and individual organism and production environment that supports the phenomena.	Capable of providing basic explanation regarding natural phenomena related to animal and plant production in levels of molecule, cell, and individual organism and production environment that supports the phenomena.						
t a n d i n		mechanism of animal and plant production in fields and relation between animals and	Sufficiently understands the mechanism of animal and plant production in fields and relation between animals and the human society and natural environment.	Understands the mechanism of animal and plant production in fields and relation between animals and the human society and natural environment.	Substantially understands the mechanism of animal and plant production in fields and relation between animals and the human society and natural environment.						
- <del>a</del>		Basic ability in communication, information processing, and physical activities required for acquiring expertise	Has superior ability in all the elements regarding communication, information processing, and physical activities required for acquiring expertise.	communication, information processing, and	Has basic ability in all the elements regarding communication, information processing, and physical activities required for acquiring expertise.						

(2) Basic experimentation abilities and skills required for acquiring expertise

Has sufficient basic experimentation abilities and skills required for acquiring expertise, and is capable of autonomously applying them. Has sufficient basic experimentation abilities and skills required for acquiring expertise, and is capable of autonomously applying them under instruction. Generally has sufficient basic experimentation abilities and skills required for acquiring expertise, and is capable of supporting their execution.

Ability for basic biological analysis and evaluation regarding production function of animals and plants in levels of molecule,

(3) cell, and individual organism

c a p s a i b v i e 1 i	(1)	pursue for a specific phenomenon related to animal and plant production, organize his/her own opinion, logically publish them	Has advanced capabilities regarding elements of comprehensive ability and skills for such as identification of targeted issues, information processing, statistical analysis, and responsive communication.		Has basic capabilities regarding elements of comprehensive ability and skills for such as identification of targeted issues, information processing, statistical analysis, and responsive communication.

#### Role of liberal arts education in this program

The liberal arts education in this program aims to build both the language skills and the academic foundation required for the specialized education. It develops not only a capability for studying autonomously and a scientific intelligence based on the ability to collect, analyze and criticize data, but also language skills that allow the student to exchange ideas with others in English. Also, it enhances insight from a broad perspective for the essentials and the background of phenomena, and the linguistic ability and concern for peace which are required for a citizen of the world. It enables students to acquire the ability to integrate findings and establish a "knowledge system" that is really useful for problem solving, and to examine phenomena using a top-down perspective based on this integrated knowledge.

③Ability for basic biological analysis and evaluation regarding production function of animals and plants in levels of molecule, cell, and individual organism							

			Laboratory and Field Works in Plant Production(©)			
(4) Basic techniques for handling and testing of animals and plants and those for breeding,			Laboratory and Field Works in Animal Production II (©)			
cultivation, and management			Farm Practice (  )			
			Seminar in Dairy Field Science (O)			
⑤Ability for basic evaluation of		Animal and Plant	Laboratory and Field Works in Plant Production(©)			
breeding environment in fields of animal and plant production			Laboratory and Field Works in Animal Production II (©)			
			Farm Practice (  )			
			Seminar in Dairy Field Science(O)			
6 Ability regarding scientific English that is required as a basis for understanding technical English manuals and			Reading of Foreign Literature in Applied Animal and Plant Science	Graduate Thesis I (◎)	Graduate Thesis II (◎)	Graduate Thesis III (◎)
international communication						
capabilities based on the						
acquired knowledge and						
approach method for the field						

### List of Faculty Members of the Applied Animal and Plant Science Program

Name of faculty	Name of program and position	Extension number	Laboratory	Mail address
Taketo Obitsu	Professor	7955	B509	tobitsu@hiroshima-u.ac.jp
Hirofumi Saneoka	Professor	7917	B111	saneoka@hiroshima-u.ac.jp
Hajime Tanida	Professor	7974	Farm	htanida@hiroshima-u.ac.jp
Masaoki Tudzuki	Professor	7950	B416	tsudzuki@hiroshima-u.ac.jp
Rumi Tominaga	Professor	7966	B105-2	rtomi@hiroshima-u.ac.jp
Takashi Bungo	Professor	7957	B505
