As of April 1, 2018

For entrants in FY 2018

Appended Form 1

Specifications for Major Program

Name of School (Department) [Integrated Arts and Sciences(Integrated Global Studies)]

Program name (Japanese)	
(English)	Integrated Global Studies

1. Degree Awarded : Bachelor of Arts and Sciences

2. Overview

The program of Integrated Global Studies has three basic principles – integrated thinking, global vision, and cooperative action – with the aim of fostering professionals who are able to discuss the various challenges facing international society from a global perspective, overcoming the differences that exist between nations, ethnic groups, cultures, and religions, and to engage in cooperative action with others. It encourages students to enhance their command of English and Japanese for communication, and offers a specialized education built on a foundation of a liberal arts education.

As such, students are required to take courses in the fields of *Culture and Tourism*, *Peace and Communication*, and *Environment and* in order to acquire the knowledge and skills required for the practice of integrated global studies. This alues the student's self-initiative in choosing courses: students can either balance the three fields in order a core of knowledge and skills, or they can focus on subjects based on one field according to their respective goals and interests.

In addition, in this program, students from various nationalities and language backgrounds study together using English as a common language. The classes often employ group discussion and active learning. The students work and learn in English, in collaboration with students from different nationalities, in order to eventually acquire the flexibility and cooperative attitude necessary for working together with people from diverse cultural and religious backgrounds, an attitude of respect for different cultures, great sensitivity, and the ability to negotiate and express opinions in English.

Students who have obtained such capabilities can choose their career path in the future as follows; they can work in leadership roles in international institutions or companies that are growing internationally, and in government organizations in their own native countries; they can also work as researchers by going on to graduate school, in Japan or overseas, to continue their studies into the various challenges facing international society.

3. Diploma Policy (Policy for awarding degrees and goal of the program)

The Integrated Global Studies Program has three basic principles – *Integrated Thinking*, *Global Vision*, and *Cooperative Action* – with the aim of fostering self-motivated and independent professionals, who are able to grasp issues from a global perspective that crosses the differences that exist between nations, ethnic groups, cultures, and religions, and have the interdisciplinary knowledge and wide range of insights, based on technical knowledge and thinking abilities, that are required in order to identify issues, analyze their causes, and find solutions. The program requires students to enhance their language skills for communication, and to take a specialized education built on the foundation of a liberal arts education. The program enables students to collaborate with others in different positions, and to work cooperatively for solutions in order to develop their ability to put integrated global studies into practice.

This program awards "Bachelor of Arts and Sciences" to students who have acquired the required number of credits set forth in the curriculum and acquired the following abilities:

(1) Integrated Thinking: Understand and analyze the various challenges confronting the international community from multifaceted perspectives transcending disciplinary boundaries between the humanities and sciences.

(2) Global Vision: Understand others irrespective of the differences among countries/regions, cultures, religions and languages, and think about things from a global perspective encompassing human society and its surrounding natural environment.

(3) Cooperative Action: Address various challenges of the international community from a peace-seeking viewpoint, and work toward the realization of world peace and harmony between people and nature, in a cooperative and creative manner.

4. Curriculum Policy (Policy for organizing and implementing the curriculum)

The Integrated Global Studies Program organizes and implements the following educational curriculum in order to realize the diploma policy set forth for the program :

(1) In order to foster *Integrated Thinking*, the Integrated Global Studies Program offers interdisciplinary and integrated specialized education beyond the borders of humanities, social and natural sciences, and is built on their liberal arts education. In the 2nd year students start studying Multidisciplinary Subjects, and then IGS Subjects, one subject of which, in principle, is completed in eight weeks and acquires one credit. Therefore, they are able to touch on a greater number of academic fields in order to acquire a broad range of knowledge, which is intended to enable students to foster the ability to understand events from a *Global Vision* and with *Integrated Thinking*. They also have the opportunity to take classes offered not only at the Department of Integrated Arts and Sciences but also at other schools, to enhance their specialization or to enable them to take interdisciplinary studies in other fields. The *Graduation Thesis* in the 4th year, as a practical educational task, requires students to fully exert their expertise and utilize their *Integrated Thinking*.

(2) 1st year: Students take Liberal Arts Education, including Foreign Languages. They are also required to take the Introductory Seminar for 1st year students offered in the 1st term of the 1st semester, as well as Contemporary Issues of Japan II and Contemporary World Issues II offered in the 3rd term of the 2nd semester, in order to learn about the three fields – *Culture and Tourism*, *Peace and Communication*, and *Environment and Society*. Through courses and discussions among students, they will come to understand interdisciplinary approaches to the various problems facing the international society.

(3) 2nd year: Students take Multidisciplinary Subjects in order to learn basic knowledge and methodologies in various fields as a foundation for discussing the various problems of international society. At the same time, they take IGS core subjects to foster their basic literacy and learn the subject. Based on this foundation, they will acquire a wide range of knowledge, skills, and thinking abilities useful for integrated global studies across a whole framework of academic fields. Students who are Japanese native speakers will study abroad for about half a year, where the credits they have acquired will be approved as credits for Elective Subjects. Students can take advanced language subjects from the 2nd year onward.

(4) 3rd year: Students gain experience in group work with those belonging to diverse cultures, nationalities, and different areas of expertise, in *Project-Type Problem Solving Research* and *Global Internship Subjects*, while continuing to take IGS subjects to enhance their expertise. They can also select Elective Subjects offered in Japanese at the Department of Integrated Arts and Sciences, and at other schools, in order to further enhance their expertise. It will be useful for students who are not Japanese native speakers to take Specialized Subjects offered in Japanese at the Department of Integrated Arts and Sciences, in order to enhance their command of the advanced Japanese language.

(5) 4th year: Students are required to take the *Graduation Thesis*. Select one of the following:

A. Research-Oriented Track

In order to enhance their *Integrated Thinking* and expertise, students take the *Graduation Thesis* to acquire six credits. Those who hope to go on to the graduate school will need to take this course. They must prepare their graduation thesis in English, in principle, although students who are not Japanese native speakers can choose to write it in Japanese instead. They will be taught to utilize perspectives from more than one field and methodology in a comprehensive manner.

B. Practice-Oriented Track

In order to foster *Cooperative Action*, students are required to take seminars that are held in cooperation with companies and other outside organizations, and submit a short essay to acquire six credits for the *Graduation Thesis*. They must prepare the essay in English, in principle, although students who are not Japanese native speakers can choose to write it in Japanese instead.

Academic achievements of Integrated Global Studies (IGS) Program

The evaluationand areas of specialization.

		Being able to fully understand, appropriately explain, and comprehend *one's own language and culture* and *other languages and cultures* that are prerequisite abilities for communication with peoples from different cultures and areas of specialization.	Being able to fully understand, explain, and comprehend *one's own language and culture* and *other languages and cultures* that are prerequisite abilities for communication with peoples from different cultures and areas of specialization.	Being able to understand, generally explain, and comprehend *one's own language and culture* and *other languages and cultures* which are prerequisite abilities for communication with peoples from different cultures and areas of specialization.
(3)	The knowledge and understanding to fully recognize the mutual relations and their importance among individual academic disciplines.	Being able to fully understand, recognize, and appropriately explain the mutual relations and their importance among individual academic disciplines.	Being able to fully understand, recognize, and explain the mutual relations and their importance among individual academic disciplines.	Being able to understand, recognize, and partially explain the mutual relations and their importance among individual academic disciplines.
(1)	The ability to collect and analyze necessary literature or data among various sources of information in individual academic disciplines.	Being able to fully collect and precisely analyze necessary literature or data among various kinds of information in individual academic disciplines.	Being able to fully collect and analyze necessary literature or data among various kinds of information in individual academic disciplines.	Being able to collect and partially analyze necessary literature or data among various kinds of information in individual academic disciplines.
(2)	The ability to specify necessary theories and methods for the consideration of important issues.	Being able to exactly specify necessary theories and methods for the consideration of important issues, and fully make use of them.	Being able to exactly specify necessary theories and methods for the consideration of important issues, and make use of them.	Being able to specify necessary theories and methods for the consideration of important issues, and partially make use of them.
(3)	The ability to summarize one's own research in reports or academic papers, deliver presentations at seminars or research meetings, and explain it in an easy way so that people in different cultures and areas of specialization understand.	Being able to summarize research results in reports or academic papers, deliver presentations at seminars or research meetings, and precisely explain it in an easy way so that people in different cultures and areas of specialization understand.	Being able to summarize research results in reports or academic papers, deliver presentations at seminars or research meetings, and explain it in an easy way so that people in different cultures and areas of specialization understand.	Being able to summarize research results in reports and academic papers, deliver presentations at seminars or research meetings, and partially explain it in an easy way so that people in different cultures and areas of specialization understand.
(1)	The ability to think in an interdisciplinary way to discover issues based on ethical research practices and subjective intellectual interests, and propose a plan to solve them.	Being able to take initiative to discover issues based on ethical research practices and subjective intellectual interests, and propose an effective plan to solve them based on interdisciplinary viewpoints.	Being able to take initiative to discover issues based on the ethics in research and subjective intellectual interests, and propose a plan to solve them based on interdisciplinary viewpoints.	Being able to discover issues based on the ethics in research and subjective intellectual interests, and partially propose a plan to solve them based on integrated viewpoints.
(2)	The ability to conduct research from a global perspective by combining knowledge, understanding, competence, and skills, based on flexible creativity and imagination.	Being able to effectively displa

Curriculum Schedule of Integrated Global Studies

Academic achievements		1st grade		2nd grade		3rd grade		4th grade	
Evaluation items		Spring semester	Fall semester	Spring semester	Fall semester	Spring semester	Fall semester	Spring semester	Fall semester
Knowledge and Understanding	The knowledge and understanding of the important characteristics and basic theoretical framework of individual academic disciplines.	○Peace Science Courses	○Peace Science Courses	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects
		○ Basic Courses in University Education	○ Area Courses						
		○ Area Courses	○ Health and Sports Courses						
		○ Foundation Courses	○ Foundation Courses						
		○ Health and Sports Courses							
	The knowledge and understanding of one's own language and culture and other languages and cultures that are prerequisite abilities for communication with people from different cultures and areas of specialization.	○Peace Science Courses	○Peace Science Courses	○Foreign Languages	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects
		○ Foreign Languages	○ Foreign Languages	○Specialized Subjects					
		○ Area Courses	○ Area Courses						
		○ Foundation Courses	○ Foundation Courses						
	The knowledge and understanding to fully recognize the mutual relations and their importance among individual academic disciplines.	○Peace Science Courses	○Peace Science Courses	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects
		○ Basic Courses in University Education	○ Area Courses						
		○ Area Courses	○ Foundation Courses						
		○ Foundation Courses							
Abilities and Skills	The ability to collect and analyze necessary literature or data among various sources of information in individual academic disciplines.	○Information Courses		○Specialized Subjects	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects
						◎Project-Type Problem Solving Research	◎Project-Type Problem Solving Research		
	The ability to specify necessary theories and methods for the consideration of important issues.	◎Introductory Seminar for First-Year Students		○Specialized Subjects	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects
						◎Project-Type Problem Solving Research	◎Project-Type Problem Solving Research		
	The ability to summarize one's own research in reports or academic papers, deliver presentations at seminars or research meetings, and explain it in an easy way so that people in different cultures and areas of specialization understand.	◎Introductory Seminar for First-Year Students		○Specialized Subjects	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects
						◎Project-Type Problem Solving Research	◎Project-Type Problem Solving Research	◎Graduation Thesis	◎Graduation Thesis
Comprehensive Abilities	The ability to think in an interdisciplinary way to discover issues based on ethical research practices and subjective intellectual interests, and propose a plan to solve them.			○Specialized Subjects	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects
						◎Global Internship Subjects	◎Global Internship Subjects	◎Graduation Thesis	◎Graduation Thesis
	The ability to conduct research from a global perspective by combining knowledge, understanding, competence, and skills, based on flexible creativity and imagination.			○Specialized Subjects	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects
				○Elective Subjects	○Elective Subjects	○Elective Subjects	○Elective Subjects	○Elective Subjects	○Elective Subjects
								◎Graduation Thesis	◎Graduation Thesis
	The ability to take action cooperatively to advance research to resolve the problem by sharing issues with people from different cultures and areas of specialization, and explaining one's own ideas logically and simply.			○Specialized Subjects	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects	○Specialized Subjects
								◎Graduation Thesis	◎Graduation Thesis
