

How is German water management organized?

Current problems and technological as well as organizational perspectives

Date & Time : July 29th (Friday), 14:35-16:05
Venue : Room 204, IDEC
Language : English

Lecturer : Prof. Dr. -Ing. Robert Holländer

Chair Environmental Technology and Environmental Management in SME
University of Leipzig

The Endowment Chair for Environmental Technology in Water Management and for Corporate Environmental Management in SME was founded by the German Federal Environmental Foundation at the University of Leipzig in 2001. Its tasks in the Institute for Infrastructure and Resources Management (IIRM) are management of environmental resources, water, waste and soil, the sustainable and safe operation of environmental infrastructure and pipelines, and environmental management in enterprises and networks.

The work is based on an interdisciplinary approach linking aspects of technology and economics. All research activities directly relate to practical aspects, starting points being regional experiences to be developed further in international scientific co-operations.

The seminar is open to all the students and staffs. Feel free to join!
